| Media: | 12cm CD/DVD Disc |
| Ribbon Capacity: | 500 Images/ribbon |
| Printing Speed: | 80 – 120 sec/disc |
| Printing Panels: | CMY & Adhesive |

THEAC's VersaMax Color printing solution is the most versatile thermal printing material in the world!

VersaMax does away with any concerns about what type of disc printing surface to use. Using VersaMax print ribbons together with the TEAC P-55 disc printer, you can now print on most smooth disc surface (thermal-printable surface is no longer required!). Bottomline.....more choices amongst discs to print onto translates to both significant production-cost savings and increased printing yields.

Unlike both photo ribbons and color ribbons, VersaMax ribbon adds a proprietary adhesive panel

to the 3 existing CMY (Cyan, Magenta and Yellow) panels for printing on most discs. This adhesive panel will enable high quality, vibrant printing on even the least expensive disc (i.e. silver lacquer).

TEAC's VersaMax ribbon is the latest addition that supports the P-55's unique four-printers-in-one stature. The TEAC P-55 now achieves the highest-quality Dye-Sublimation printing with the use of TEAC's photo ribbons; is a vibrant color Thermal Re-transfer printer with the use of TEAC's color ribbons; a true black printer with the use of black ribbons; and the lowest-cost, most versatile printer that will print on most smooth disc surface with the use of VersaMax ribbon.
