

Remote duplication and printing  
Easy to follow, step-by-step wizards  
Integrated Nero software  
Integrated label designer software  
Job queue feature

 DISCPILOT  
CopyDisc Software

DiscPilot provides networked duplication for standalone CopyDisc units as a factory fitted option.

This easy to use yet sophisticated and versatile CD and DVD duplicator and printer management software system provides multiple users with access to a Verity Systems CopyDisc system. DiscPilot allows the CopyDisc to act as a peripheral device across a network.

DiscPilot is a completely new way of networking your CopyDisc system using a high speed USB connection for improved reliability and data transmission rates.

Verity Systems PublisherNET forms the link between the CopyDisc and the host PC. PublisherNET establishes a connection with the CopyDisc through the USB connection and manages data transmission. This Windows based software suite enables you to duplicate an ISO master stored on your file server, and to request the required number of discs for your duplicator to produce. CD master images can be stored on the file server and the required number of copies requested direct from the nominated PC. CD/DVD image masters and print images (where applicable) can also be selected from the duplicator.

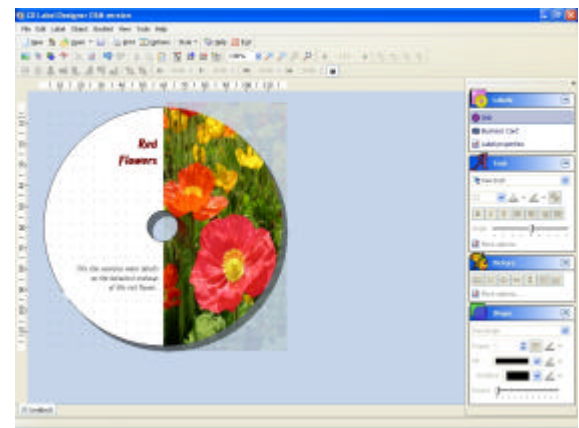

Typical CopyDisc & DiscPilot Network setup

DiscPilot has a fully integrated disc image creation tool (using Nero technology) and a fully integrated disc label creator. From within DiscPilot you can create your labels, disc images, combine and send them as a 'job' and manage the files on your CopyDisc hard drive.

DiscPilot's step-by-step wizard is so simple to use complete novices to the world of CD and DVD publishing will quickly be able to produce CDs and DVDs confidently and at the touch of a button.

Users with little or no background in designing disc print images can be confident of professional looking discs time after time with the easy to use integrated disc label design software.

Creating discs over the network is as easy as printing to a networked printer with no technical expertise required.

- Formats:
- CD-ROM ISO Data Image (.iso)
  - CD-ROM NERO Data Image (.nrg)
  - DVD ISO Data Image (.iso)
  - DVD Nero Data Image (.nrg)
  - CD-ROM Nero Audio Image (.nrg)
