

Media cellophane overwrapper

CDC100 Series

- CD Jewel case standard & slim, DVD Amaray and Blu-ray cases
- Better finish than shrink wrapping
- Wraps up to 250 cases per hour
- Table top unit – easily transportable
- Low cost investment

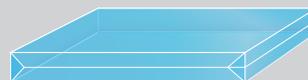

Easy to use

The semi-automatic operation is simple and effective. A pre-cut sheet of polypropylene wrapping material is placed on the manual platform. The case is simply placed on the pre-cut sheet and the operator closes the cover. The case is then placed into the hopper for the second fold and seal operation, which is fully automatic. The result is a professionally folded and sealed CD or DVD case.

Advanced technology

The Speedwrapper allow the user maximum control with sealing temperature being electronically controlled and adjustable. For safety, the unit will stop automatically in the unlikely event of a jam.

Retail ready CDs and DVDs

The CDC100 series give a wrapping finish equal to that of CDs and DVDs found in any retail outlet. The CDC100 series of wrappers provides a neatly folded and sealed package.

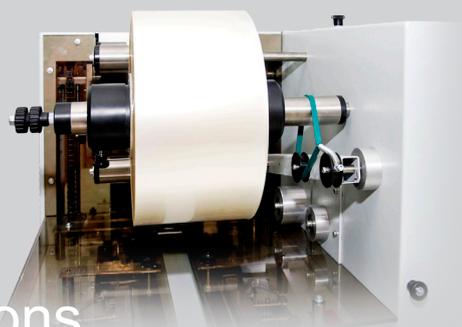

Operators wishing to wrap small to medium quantities of CD and DVD cases can now achieve a quality finish equal to the standard of more expensive finishing machines, with the CDC100 series of overwrappers from JMV Robotique.

Available for standard jewel cases (CDC100), slim line jewel cases (CDC140), DVD "Amaray" type cases (CDC160), and Blu-ray cases (CDC170), these tabletop units are dedicated to small or medium scale production of discs and are a cost effective solution providing professionally finished packaging for short run work, at a tenth of the cost of industrial equipment.
